Custom Gobos

Custom gobos can be made to fit virtually any stationary or moving light. Your artwork may be a logo, text, a photo or any image. But the critical decision is choosing the right vendor. When you place your order with a dealer, the dealer will probably recommend that your custom gobo be manufactured at Rosco. Here's why:

Rosco manufactures its own dichroic glass in its purpose-built facility in Round Rock, Texas. Dichroic glass is the basic building block for glass gobos. Virtually all other gobo manufacturers have to buy their dichroic glass from various outside suppliers. Manufacturing its own glass assures color consistency from gobo to gobo and from batch to batch. It also assures that the gobo will be the same in quality if more copies need to be manufactured months after the original tooling. For many clients or company managements, color consistency in, for example, corporate logos is an overriding concern.

Although Rosco's standard dichroic glass thickness is 1.75mm, our manufactured glass gobos are as thin as 1.1mm thickness for black & white and one color gobos and 1.9mm for hi-resolution multi colors. This is particularly important because of the optics capability in today's highly advanced light fixtures. The substrates used allow a better focal plane. Such gobos will also fit the gobo slots of most instruments far more effectively, allowing for maximum usage of the light fixtures' projection capabilities.

See page 61 for details on specifying custom gobos.

Choosing Standard Gobo Designs Online

Many designers prefer to choose their gobos online. Rosco's new Gobo Website makes it easier and faster.

All the gobos in this catalog are shown on the site. You can choose by categories, as in this catalog, or search by name or number. You can also enlarge or reduce the illustrated designs.

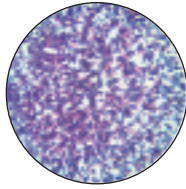

Rosco's Gobo Website is at:
<http://www.rosco.com/gobos>

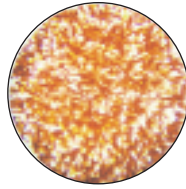

Colorizers™

Rosco's Colorizers can be used to create beautiful multi-colored projection effects. Colored in gentle hues in one of three styles—stippled, featherlight, or free flow—Colorizers can be used alone or combined with a steel pattern for a more dramatic effect. Designs marked with an asterisk * are available in X Size for use in the Rosco X-Effects Projector.

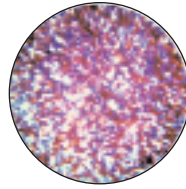

Stippled Series

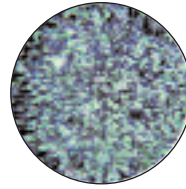

55004*
Blue and Lavender

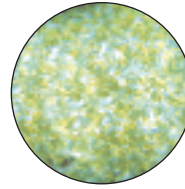

55005*
Amber and Red

55006*
Red, Blue and Lavender

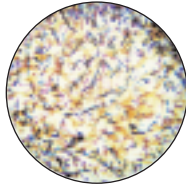

55007*
Green, Blue and Lavender

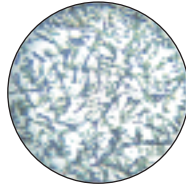

55008*
Green and Yellow

Featherlight Series

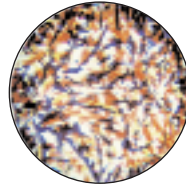

Similar to the Stippled Colorizers, but with a less dense “feather duster” pattern to allow more white light through.

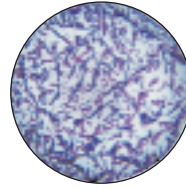

56201
Blue, Lavender and Yellow

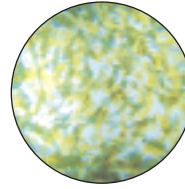

56202
Blue and Green

56203
Red, Lavender and Yellow

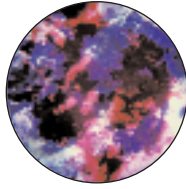

56204
Blue and Lavender

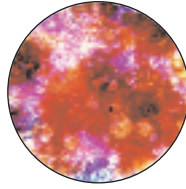

56205
Green and Yellow

Free Flow Series

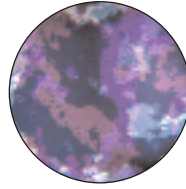

A combination of colors smoothly blended together in a unique, flowing design.

56101*
Cool: Blues, Reds
and Lavenders

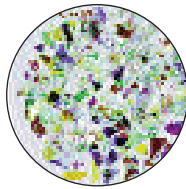

56102*
Warm: Red, Ambers,
Blues and Lavenders

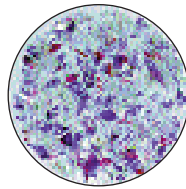

56103*
Midnight: Blues,
Lavenders and Greens

Prismatics™

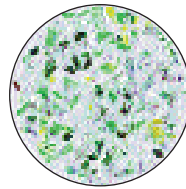

Prismatics are recommended for use in moving lights with lamps up to 1200 watts. In ellipsoidal fixtures, they should be used with a 600 watt lamp, though short term use with lamps up to 750 watts may be acceptable. Prismatics require the use of the Universal Iris Slot Holder. Prismatics are available in standard B Size or in smaller sizes for automated luminaires by special order. Prismatics are NOT available for use in the Rosco X-Effects Projector.

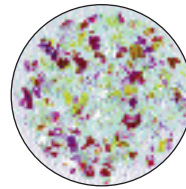

43801

Image Glass™

Rosco's Image Glass is deeply textured glass that refracts and bends light into intricate patterns of light and grayscale images. Altering the sharp focus of the fixture transforms the image into subtle and complex textured shadows. Image Glass is available in standard B Size or in smaller sizes for automated luminaires by special order. Designs marked with an asterisk * are available in X Size for use in the Rosco X-Effects Projector.

ColorWaves™

Rosco's ColorWaves are a new idea in glass gobos to help create vibrant colored textures and shapes. Each glass texture—Waves, Sparkelite, Strands, Ripple or Mosaic—is coated in one of five brilliant dichroic colors. The projection is a remarkable and unique combination of color, texture, shading and blending. ColorWaves are available in standard B Size or in smaller sizes for automated luminaires by special order. Designs marked with an asterisk * are available in X Size for use in the Rosco X-Effects Projector.

Tips Building A Full Stage Gobo Wash

To wash the large areas of stage or scenery with foliage breakups, choose a breakup design that has interlocking or uneven edges, not an obvious circular perimeter. When you combine the projections from several fixtures, the shadows blend together with few noticeable “seams.” Ken Billington’s Interlocking Breakup design perfectly illustrates this technique.

Tips

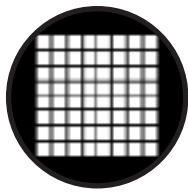

Add Depth By Combining Steel and Glass Gobos

A steel gobo creates a flat, two-dimensional image. Many projections are improved when the illusion of depth is achieved. Try adding a layer of Image Glass in with your steel gobo to enhance the look of your scene.

Tips Build Your Own Projection

The Rosco library contains literally thousands of images from which to choose the perfect design—and still sometimes you can't find just the right image. Try sandwiching two designs together to create one new gobo design.

Layer steel gobo #79119 behind steel gobo #77703 to project a perfect haunted scene.

Gobo Sizes

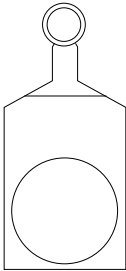

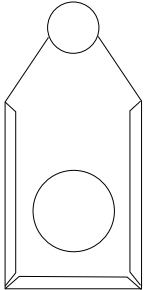

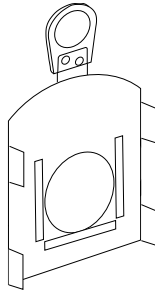

Rosco offers the entire range of steel and glass gobos in sizes to fit most modern luminaires. In addition to these standard sizes, Rosco will manufacture any gobo into non-standard sizes (barring technical constraints) and make them available at the standard price. Contact Rosco for details and lead times.

- A Size – 100mm
- B Size – 86mm
- BG Size 79mm
- M Size – 66mm
- D Size – 53.3m
- D Glass – 51.8mm
- E Size – 37.5

Gobo Holders

With the breadth and depth of gobos available, it is important to choose the gobo holder that is appropriate for your luminaire (most luminaires must use a specific size gobo) and for the type of gobo you are using (some gobos are thicker than others and require a special holder to accommodate it).

For Lekos, Rosco offers holders to accommodate most luminaires and most gobo types.

Steel Gobo Holder Sandwich Style	Glass Gobo Holder	Universal Iris Slot Holder
		
No. 13586 – Altman B size No. 13686 – ETC B Size No. 13610 – ETC A Size	No. 14579 – Altman BG Size No. 14686 – ETC B Size	No. 15786 – B Size Universal No. 15710 – A Size ETC No. 15766 – M Size ETC

Gobos for Moving Lights

Rosco will make every effort to produce any Rosco gobos design for any automated luminaire you specify. The limiting factors are size and information. Our technical team is in communication with all major manufacturers of moving lights and we try to maintain a complete, up-to-date database of the most current fixtures in order to have all of the technical information required to produce a successful gobo. In rare cases, you may request a gobo for a luminaire not in our database and for which we have no sizing information. Work with us to get it and we will be happy to make your gobo and meet your deadline!

Temperature, Durability, and Maintenance

Stainless Steel Gobos

Steel gobos can withstand the heat from virtually any modern luminaire, at least for a short while. In luminaires under 1200 watts, a steel gobo can be expected to last for months or longer of typical theatre usage. It is common for the gobo to discolor and possibly warp due to the intense heat but the integrity of the design will remain intact. In some designs with extremely fine line details, excessive heat may damage these fragile elements prematurely. When used in luminaires over 1200 watts, the lifespan will be reduced to some extent, depending on the heat and focus of the lamp.

Effects Glass Gobos

Colorizers are made using high temperature fused silica glass that can withstand the high temperatures from lamps up to 2500 watts. The color and patterning will not be affected by typical use in common fixtures and you can expect them to last for years unless dropped or physically damaged.

*Image Glass, Prismatic*s and *Colorwaves* are suitable for long term use in fixtures under 600 watts, or for intermittent use in fixtures up to 1200 watts or less. In these higher wattage luminaires, sustained excessive temperatures may result in cracking, delamination of the Prismatic's chips or peeling of the dichroic coating.

Glass Gobos

Black and White Glass Gobos are typically made on high temperature borosilicate glass coated with Rosco's unique Ultra-Matte™ aluminum coating. These Ultra-Matte B/W gobos are designed for use with high wattage lamps up to 1200 watts, as well as high output luminaires such as the Robert Juliat D'Artagnan. A Rosco Ultra-Matte B/W gobo can be installed with either surface facing the lamp without damaging the gobo. For certain fixtures, or upon request, Rosco B/W Glass gobos can be manufactured using Black Oxide Aluminum. This coating, applied to the same high temperature borosilicate, will reduce imaging problems found in some fixtures, such as double imaging due to internal reflections. A BLACK OXIDE GOBO MUST BE INSTALLED WITH THE BLACK SURFACE FACING AWAY FROM THE LAMP. Failure to install this gobo properly will result in immediate damage to the gobo.

Color Glass Spectrumgobos by Rosco have tremendous heat resistance due to the dichroic layers used in the manufacturing process. These gobos can withstand heat in luminaires up to 2000 watts or more and do not degrade under the heat. In extreme environments, cracking or delamination may occur. Used properly, a Rosco Glass Spectrumgobo can be expected to last for years with no apparent wear.

In all cases, a properly adjusted lamp focus that reduces hot spots and creates an even field of light will increase the lifespan of your gobos!

You need a custom gobo when you want specific images or text in your production. The most obvious example is a logo, or the name of the guest of honor at an event or the star of a show. Fortunately, manufacturing a gobo to your exact needs and specifications nowadays is fast, easy and affordable.

Custom steel gobos, for example, are shipped in just one day. (Orders received at Rosco on Monday ship from our gobo factory in Texas on Tuesday.) Custom glass gobos take a little longer, but all orders get the same meticulous attention and quality control that has made Rosco the world leader in gobo design and manufacturing.

Rosco custom glass gobos are widely used in both stationary and moving lights. They offer the advantages of very sharp fidelity in both photographic and drawn images and, of course, brilliant projected color.

Rosco manufactures the dichroic filter layers of glass gobos in its Texas facility. This self-contained manufacturing capability, unique in the industry, allows Rosco to maintain real control over the color quality in the images it creates into gobos. Many companies and institutions require this kind of control in the color of its products, logos or insignias.

Custom glass gobos requiring only black or any other single color are produced in two days. (Orders received at Rosco on Monday are ready to ship on Wednesday.) Custom glass gobos with two colors require three days and full color five days.

Rosco, unique among gobo manufacturers, creates the dichroic glass in its own facility. This in-house process allows better control both for one-, two- and three-color glass gobos and for the four layers (CMYK) of the high-resolution color gobos, as shown here.

ORDERING A CUSTOM GOBO

Rosco is the world's largest manufacturer of gobos. It has a dedicated and knowledgeable Customer Service team just for custom gobos. The sole mission of this team is to make the process of getting a custom gobo easy and error-proof. These three steps will insure a successful outcome:

1. Email your artwork to customgobo@rosco.com

- The artwork can be in almost any form, but designs with very fine details should be no smaller than 3" x 3" at 150dpi. Remember, a high quality image requires a high quality file to work with. You should consider using Adobe Illustrator for line art (eps or ai formats) and Adobe Photoshop for images that contain gradients or greyscale elements (psd or eps files). For high-quality, full-color gobos, a good rule of thumb is to submit 1800pix x 1800pix files. Almost any file format such as jpg, psd, ai, tif, pct, or png is acceptable. Do not send WordArt or CAD files.
- If your digital file makes use of fonts, you must indicate the name of the fonts used or send us copies of the font files to use.
- Scans of drawings or illustrations used for custom steel gobos can be faxed to 1-512-388-0196.
- Make sure to submit color gobo artwork in color. For images with exacting color match requirements, referencing Pantone colors will ensure the best color match possible.

2. Specify what you need and when

- Indicate the quantity and size gobo you need for each design you submit, as well as the lighting fixture(s) you will use to project them.
- If you will be using an uncommon fixture, please make sure to indicate size of the Outer Diameter of the gobo as well as the Image Area . You can always check our website for more information about your fixture. Or, contact our technical service department and we'll assist you in tracking down the correct specifications.
- Indicate whether the gobo will be a front (most common) or rear projection.

3. Place your purchase order with your local Rosco dealer.

Your dealer will provide us with all the details. But to be safe, please tell us when you need the gobos, where to ship them, and, most importantly, how to contact you if we have questions

Some Additional Tips

Steel Standards on Glass—any Rosco steel gobo designs can be made on black & white glass and shipped to you in just 2 days! This is an ideal solution when using modern moving lights that cannot accept steel gobos.

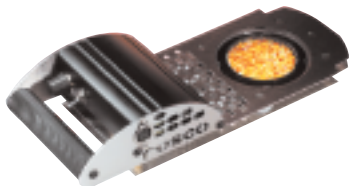

Keystone and Distortion Correction—When hanging positions make it impossible to project your image without distortion, Rosco artists will assist in adjusting the artwork to compensate. Call for more information.

Rush Services—Sometimes there just isn't enough time in the production schedule. If you need a gobo delivered on Saturday, flown in on counter-to-counter service, or just won't make our published cut-off times, just ask. We'll always do whatever possible to make sure you get what you need, when you need it!

Proofs—Want to make sure the gobo we make is exactly as you need? Request that a proof of the gobo be sent to you before manufacturing. We'll gladly send you the tooling for you to approve. Just keep in mind that any delays in the approval process may delay delivery of your gobo. Proofs are not possible for same day rush or on color glass rushes.

Vortex 360 Dual Rotator™

The Vortex 360 Dual Rotator is one of the most versatile accessories ever offered to lighting designers. And its incredibly low price makes it possible for any theatre or venue to have several units available to cover any space or meet any need.

The sleek unit houses two carefully crafted gear drives, both made of stainless steel, to assure long term operation. A single silent motor drives both gear assemblies. Even at full speed, the Vortex 360 Dual Rotator is so quiet it can be used anywhere in a theatre or venue—including front-of-house positions in a theatre or grids on low ceilings in restaurants or stores.

No. 205 83000 0120 Vortex 360 Dual Rotator

Indexing Rotator™

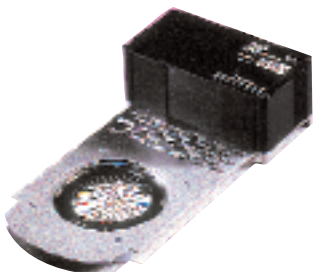

Rosco's Indexing Rotators are Double and Single Gobo Rotators which allow you to stop and start the gobo's rotation precisely, whenever and wherever you want. This is particularly useful for repetitive effects, such as the hands of a gobo clock, or for architectural effects, such as a shop display window. Rosco's Indexing Rotators are controlled through DMX512 and the DMX addressing facility is built into the unit. You control both the speed and direction of the rotation as well as the indexing position (up to 180 degrees available) and the amount of time the gobo stays in that position. A Power Supply Unit is necessary to get 24v DC to the Indexer(s).

No. 205 11100 0120 Single Indexing Gobo Rotator
No. 205 21100 0120 Double Indexing Gobo Rotator

Double Gobo Rotator™

Rosco's Double Gobo Rotator allows you to achieve kinetic and often spectacular lighting effects by rotating two gobos in the same or opposite directions, at the same or varying speeds.

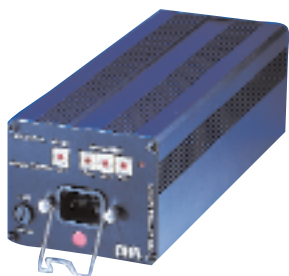

The exceedingly quiet operation of this 2.5 lb. unit allows it to be used in virtually any lighting position. This model provides forward and reverse rotation of each gobo in the same or opposite directions.

This rotator fits the ETC Source Four or the Altman Shakespeare or 1K. It requires a controller or MFX Control Adaptor.

No. 205 21000 0120 Double Gobo Rotator —
DC Vari-Speed, 0-9 RPM

DMX/DC Controller

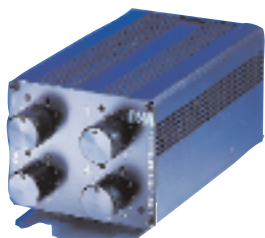

The Rosco DMX/DC Controller provides power and speed control for the Double Gobo Rotator or other variable speed effects. It is intended for remote control via a DMX512 signal. The output circuitry of Rosco's DMX/DC Controller is identical to that of its four channel Variable Speed Controller. Speed, range, bi-directional drive, load compensation and output protection are all maintained. The advantage is in accuracy and repeatability as well as the convenience of the DMX system. Effects can be programmed with other lighting directly into a cue sequence on a suitable lighting console.

No. 205 45000 0120 DMX/DC Controller

Variable Speed Controller

This four channel Variable Speed Controller is designed to provide power, direction and speed control for Variable Speed Motion Effects units on four independent channels. Output connections are made via four conductor cables terminating in two 4-pin XLR connectors.

No. 205 46000 0120 Four Channel Controller

iPro Image Projector™

Rosco's iPro Image Projector offers users an easy, inexpensive solution for projecting photographic quality images in a theatrical or event environment. The iPro Projector is a precisely engineered accessory which fits the iris slots of most modern spotlights. It hosts iPro slides, which can be prepared from virtually any electronic art work.

There are three ways, all low cost, for preparing the iPro slides you will need. First, you can order one or more from Rosco's iPro slide library. The library is available for perusal on the Rosco web site. Or you can create the artwork on your own computer using Adobe Photoshop or similar software. Send the artwork to Rosco and a finished assembled iPro slide will be on its way back to you within 24 hours. The third method, for the unapologetic

do-it-yourself technician, is to use your own transparency film and your own printer to create the image and a Rosco One Time Slide Kit to assemble the finished iPro slide.

The iPro Image Projector fits as an accessory into the iris slot of, among others, an ETC Source Four, Altman Shakespeare, Strand SL or Selecon Pacific spotlight. Fitted with an iPro slide, the system will deliver bright, visible fill color images that will last between 15 and 50 hours.

No. 265 25100 0120

Custom iPro Slide projected on a auditorium wall.

<p>Custom slide</p>	<p>Library slide</p>
<p>Both slides — same price!</p>	

X24 X-Effects Projector™

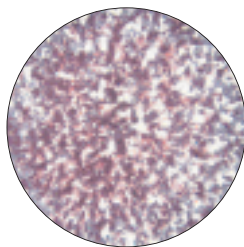

The X-Effects Projector provides large scale, 3-D effects previously unavailable to lighting designers. The device utilizes a 200-watt Enhanced Metal Arc source, whose short arc allows for an output of 5000 lumens, and a 7000 hour lamp life. The color temperature is similar to a Xenon source at 6000°K, but with nearly two times the luminous effectiveness (or efficacy). The projector is available in two configurations, DMX on board and analog.

- No. 205 37015 0120 X24 X-Effects Projector – DMX
- No. 205 37020 0120 X24 X-Effects Projector – Analog

The designers at Focus Lighting found a brilliant solution to projecting rippling water on the ceiling of The Pier in Caesars Atlantic City. X-Effects Projectors gave them the effect they wanted. Photo by J. R. Krauz.

Animation Disk
No. 82511

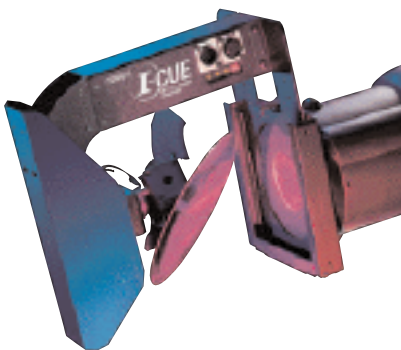

Infinity™

The Infinity, Rosco's new gobo animation device, offers superb kinetic lighting effects combined with simplicity of use and low cost. The Infinity device affixes to the gel frame of virtually any spotlight. Affix one of the disks to the device, place a steel or glass gobo in the gate, plug the Infinity into an outlet or dimmer and watch magic appear on your stage or studio. The Infinity is equipped with onboard control of the Animation Disk speed and direction, as well as an on/off switch. It will fit the gel frame of luminaires such as Altman 1-K and any fixture with a 7½" gel frame. It is also supplied with an adaptor plate for Source-4 sized fixtures or any spotlight with a 6¼" gel frame.

No. 205 82500 0000 Infinity

Supplied with an adapter plate and one Animation Disk.

Rosco's Infinity was affixed to two overlapping spotlights to generate this realistic rain effect. Both spotlights included a Water 1 gobo (no. 7833) in their gates. The Infinity in one unit was disk 82519, in the other disk 82511.

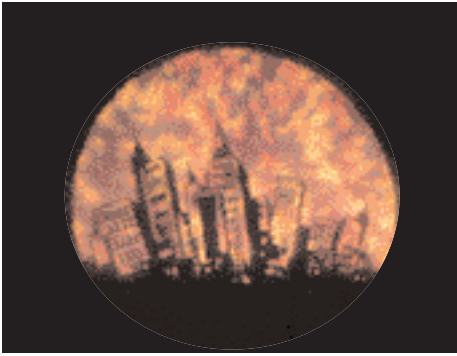

I-Cue Intelligent Mirror™

The Rosco I-Cue Intelligent Mirror is an ellipsoidal spotlight attachment that allows you to use your spotlight with much greater flexibility and control. The unit slides into the color slot of the ETC Source 4, Altman Shakespeare, Strand SL, and Selecon Pacific. The major function of the unit is to reposition the beam of light so a single spotlight in a fixed position can be used for multiple specials in dozens of locations. With its onboard DMX, the unit is controlled directly from your lighting console giving you precise control of the mirror's pan and tilt motion.

No. 205 81000 0120 I-Cue
