

Controlling Light Spill Just Got A Lot Easier

Filmmakers love to use soft light to illuminate their imagery, but diffused light has the tendency to spread into areas of the set where it's not wanted. Egg Crate Butterflies allow filmmaking crews to control spill from the large frames of diffusion they use to soften light on set.

FEATURES

- Available in 40° and 50° configurations
- Manufactured using a lightweight, durable, light-absorbing fabric
- Sag-resistant design and construction, offers superb beam control – even when horizontal
- Available in six standard frame sizes from 4'x4' to 20'x20'
- Can be customised to fit non-standard frames
- Includes innovative, quick-release bungee cords, for quick attachment to the frame
- Ship inside a water-resistant carrying bag
